NEW AND RARE BUDS AND PLANTS BY MAIL.

For June, July, August and September 1889.

Costly Varieties within the reach of all.

A Nursery at Your Door,

TO OUR CUSTOMERS:—Encouraged by the liberal patronage given by the public in the issue of our bud circular last summer, we are induced to present this one to our patrons with few additions of new choice varieties of Oriental fruits. A good many of our patrons prefer buying buds than trees. Our regular fall catalogue for trees will be mailed to all who apply for it. We offer you only what is truly valuable, and will amply pay your care and attention:

HATTOKIN No. 1.—H. H. Bergers' strain. This, the earliest of the Oriental plums twice the size of the Wild Goose, and not quite ripe this the 29th day of May. Fruit oval, yellow transparent in color.

HATTOKIN No. 2.—Burgess' strain. This variety has fruit heart shaped with pointed end, a little longer in shape than the Kelsey.

YOSOBÉ.—Our trees of that variety are bearing a few fruits. Can not tell when it ripens yet.

TRUE SWEET BOTAN.—We have three varieties of the Botan. We offer buds of only one kind, our trees are loaded with large round fruits. This variety is one of the most promising that we have on our grounds.

URA BENI.—We believe this variety to be the same as the Hoyo Smomo. The two varieties looks exactly alike in growth and foliage.

ENGRE.—A thrifty grower, our trees of that variety are yet too young to bear.

BOTONKIO No. 1.—It Resembles the Apricot in foliage, has not fruited with us yet.

BOTONKIO No. 2.—This variety blooms too early for this latitude, would probably do well where the Peen-too peach grows.

SATSUMA BLOOD.—Is a vigorous grower, with dark red bark and lanceolate leaves. Our trees of that variety has been cut back so much last summer to supply the demand for buds, only a few fruits are growing on our trees which looks promising.

CHABOT.—Vigorous grower abundant bearer, fruit greenish purple, as large as the Kelsey plum, we have fruited that variety last year and we find it a truly magnificent fruit.

DWARF JAPAN BLOOD PEACH:—This variety we have fruited the last two season, ripens with the Alexander, and is equally as large, ripening all over evenly clear to the stone, has a small white stone and very prolific. Color of fruit splashed with red and marbled with red inside. The tree bear when very young. We have trees 18 inches high budded last summer that bore a few peaches. The tree of a dwarf growing habit.

Price of all the above described plums and two varieties of peaches, by mail post paid:—Per 100 buds, 50 cents, per 1,000 \$3 00.

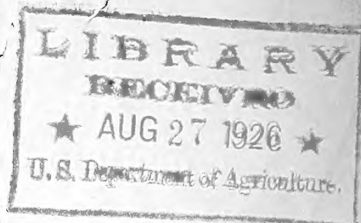

NEW VARIETIES OF VERY RECENT INTRODUCTION:

“BURBANK” JAPAN PLUM.—We have secured this variety direct from the Experimental grounds of Mr. Luther Burbank of Cal. Mr. Burbank says that it is the best of all the Japan plums and describes it as follows: This fruit is usually from five to five and a half inches in circumference, and varying less in size than the other Japan plums; nearly globular, clear cherry red, with a thin lilac bloom. The flesh is a deep yellow color, very sweet, with a peculiar and very agreeable flavor. The tree is vigorous with strong upright shoots, and large and rather broad leaves. Commences to bear usually at two years of age. Last summer (1888) fifty five large perfect fruits ripened on a two-year old tree, which was standing with others thick in nursery row.” This plum was named by Prof. H. E. Van Deman, Chief of the U. S. Department of Pomology, Washington, D. C., in honor of the introducer. Price per 20 buds 50 cents, per 100 buds \$2 00.

KAH-NO KO PEACH.—This peach has a strong resemblance in leaf, habit and growth of the Southern Chinese race of peaches. We have secured this variety from

Tree Fruits Included

Low Low

✓ **PRUNUS SIMONI.**—This remarkable plum come from Northern China. The fruit differs from any in cultivation—large tomato shaped, a shy bearer with us unless planted in close proximity to some other variety that blooms with it to fertilize the blooms.

✓ **YELLOW JAPAN.**—Our trees of that variety are well loaded with fruits, it is the most vigorous grower of our whole collection of Oriental plums. When ripe said to be a fine yellow plum beautifully transparent; almost globular in shape.

✓ **OGAN.**—Large yellow variety, late to bloom, said to ripen early, and a good keeper and shipping fruit.

✓ **KELSEY.**—A dwarf growing tree, fruit very large, ripens in August, very popular in the extreme south, this variety is the tenderest of all, will not do much above the fig belt.

✓ **PRUNUS PISSARDI.**—A fine growing tree the foliage is deep purplish blood color, fruit small and not very good, but as an ornament for the lawn it is fine.

✓ **MASSU.**—A fair grower, a shy bearer with us, said to require 3 or 4 years before bearing well, a large a delicious plum.

✓ **MUIR PEACH.**—Our trees of that variety grows and has foliage like the Peen-Too peach, this peach is the best we have ever tasted. We believe perfection has been reached in flavor. Color of fruit yellow, freestone, very small stone, a thrifty grower, ripens the first week in July.

Terms cash with order. No orders filled for less than one dollar. Order now for June budding. Try a few plants of the Cassava and be up to the march of progressive horticulture.

Address -

J. L. NORMAND
Marksville, La.
Avoyelles Parish.

Mr. H. E. Amable of San Francisco traveled and resided in Japan for 20 years and says that it is the best peach that grows in Japan. Price Per 20 buds 50 cents, per 100 \$2 00., post paid by mail in any portion of the United States, guaranteed to reach in good condition.

Cassava;

We have now ready rooted plants of the Cassava at 25 cents each or 6 plants for \$1 post paid by mail. 6 plants will produce enough stalk to set out over two rows one acre long the following year. This 6 plants will produce about 600 running feet of stalk Order now and set them out during June and July, the sooner the better.

You will find this the most productive root crop in the world. Fine feed for hogs, cattle, sheep and poultry. For mode of culture, harvesting, keeping seed over winter, etc. send 10 cents for March 15th issue of the Texas Journal of Horticulture, published at Tyler, Texas. You will find this the best paper devoted to horticulture for the south, its contributors are live, progressive and practical fruit growers of the South.

All inquiries in regard to horticulture we will cheerfully answer, provided you enclose a 2 cent stamp.

A Special Request:—We are anxious to obtain the addresses of all fruit growers and Nurserymen who propagate their own trees. If you will send us the names with P. O. address at once, and when you order remind us of it, we will add a few buds extra to your order.
